

## MINERAL SLATE GRANULES

Slate or ceramic granules, supplied in bulk

Ceramic mineral granule in bulk. Mineral chippings are commonly used as a surface finish for flat or low-pitched roofs, particularly those made of bitumen. These chippings are made from crushed natural slate. The chippings are applied to the surface of the roof as a protective layer that helps to prevent damage from UV rays, extreme temperatures, and weathering. They also provide a non-slip surface that makes it safer to walk on the roof for maintenance or repairs. In addition to their functional benefits, mineral chippings can also enhance the aesthetic appearance of a roof, as they come in a range of colors and sizes that can be used to create different patterns or designs.

### Presentation

- Colour: Light grey
- Product code: 700001
